

HUNT PROPERTY

Complete MongoDB Data Model & ER Diagram Documentation

Colored ER Diagram

MongoDB Design Strategy

Hunt Property uses a hybrid MongoDB model combining document embedding and referencing.

This balances fast reads for property listings with scalable write-heavy collections like inquiries and reviews.

- Embedded: location, images, amenities
- Referenced: users, reviews, inquiries, favorites, visits, transactions

Collections Overview

1. users
2. properties
3. reviews
4. inquiries
5. favorites
6. transactions
7. property_stats (optional)

Property Document Schema (JSON)

```
{  
  _id: ObjectId(),  
  owner_id: ObjectId(),  
  title: "2 BHK Apartment",  
  description: "Spacious flat near sector 62",  
  transaction_type: "rent",  
  price: 18000,  
  bedrooms: 2,  
  bathrooms: 2,  
  area_sqft: 900,  
  furnishing: "semi-furnished",  
  location: {  
    address: "...",  
    locality: "Raj Nagar",  
    city: "Ghaziabad",  
    geo: { type: "Point", coordinates: [77.412, 28.673] }  
  },  
  images: [{ url: "...", is_primary: true }],  
  amenities: ["Lift", "Parking", "Power Backup"],  
  posted_at: ISODate(...)  
}
```

Index Recommendations

- Geo Search Index
- ```
db.properties.createIndex({ "location.geo": "2dsphere" });
```

- Full Text Search

```
db.properties.createIndex({ title: "text", description: "text" });
```

- Filters

```
db.properties.createIndex({ transaction_type: 1, price: 1 });
db.properties.createIndex({ bedrooms: 1, bathrooms: 1 });
```

## Sample Search Queries

- 1) Geo-based property search

```
db.properties.find({
 "location.geo": {
 $near: {
 $geometry: { type: "Point", coordinates: [lon, lat] },
 $maxDistance: 5000
 }
 }
});
```

- 2) Text search

```
db.properties.find({ $text: { $search: "2 BHK metro" } });
```

- 3) Filter by price and bedrooms

```
db.properties.find({ transaction_type: "rent", price: { $lte: 20000 }, bedrooms: { $gte: 2 } });
```
